WILDLIFE REVIEW

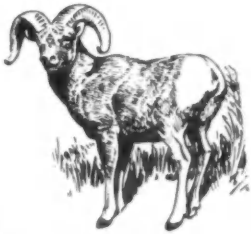
NUMBER 175 **DECEMBER 1979**

UNITED STATES DEPARTMENT OF THE INTERIOR
FISH AND WILDLIFE SERVICE

Limited copies of the following publications are available from: Editorial Office, USFWS, Aylesworth Hall, CSU, Fort Collins, Colorado 80523, on a first come, first served basis.

Folitarek, S. S., ed. ECOLOGY OF THE WATER VOLE AND ITS CONTROL IN WEST SIBERIA. Al Ahram Cent. Sci. Transl. TT75-59022. viii + 583p. 1979. Translation from the Russian of Izdat. "Nauk" Sibirskoe Otdelenie Novosibirsk, 1971.

Wildlife Review back issues. Numbers 169, 172-174. Sport Fishery Abstracts back issues. Volumes 23 and 24 (numbers 1-4).



WILDLIFE REVIEW

An indexing and abstracting publication
of wildlife literature issued by the
Fish and Wildlife Service
UNITED STATES DEPARTMENT OF THE INTERIOR

December 1979 Colorado State University, Fort Collins, Colorado 80523 No. 175

AVAILABILITY OF REPRINTS AND PUBLICATIONS

Wildlife Review does not distribute any of the papers abstracted herein, nor can the editor of *Wildlife Review* undertake to obtain copies of these papers for anyone. A reprint of an article published in a journal may be available from the author, from the organization with which the author is affiliated, or from the publisher of the journal in which the article appeared. When an author's address is known, it is shown in square brackets following the citation. Addresses of most wildlife organizations can be obtained from the *Conservation Directory*, an annual publication available from the National Wildlife Federation, 1412 16th Street, N.W., Washington, D.C. 20036, at a price of $4.00 a copy. This directory lists more than 900 agencies and organizations concerned with natural resources use.

Use of funds for printing this publication approved by the Director of the Office of Management and Budget, March 3, 1976.

Camera copy for this issue of *Wildlife Review* has been generated by computer programs developed by the Office of Library and Information Services, U.S. Department of the Interior, Washington, D.C.

SOILS

[Dep. Biol. Sci., State Univ. N.Y., Albany 12222] Abstract: Shrews (/Blarina brevicauda/) were offered /Rana catesbeiana/, /R. clamitans/, /R. palustris/ and /R. sylvatica/ as prey. /Rana palustris/ and /R. sylvatica/ survived significantly (p less than 0.05) more often than /R. catesbeiana/ or /R. clamitans/ of similar size. Adult /R. palustris/ assumed an antipredator posture more often in response to shrews than any other species tested. Both /R. palustris/ and /R. sylvatica/ are somewhat unpalatable to shrews.

[Platte Tech. Community Coll., Columbus, Nebr. 68601] Abstract: Evidence of direct mortality to vertebrates was gathered following controlled spring burns in a reestablished prairie in eastern Nebraska. During 3 years (1974-1976) in which observations were made, several species were killed by fires, including: cottontail rabbits (/Sylvilagus floridanus/), western harvest mice (/Reithrodontomys megalotis/), voles (/Microtus pennsylvanicus/ and /M. ochrogaster/), bull snakes (/Pituophis melanoleucas/), plains garter snakes (/Thamnophis radix/) and red-sided garter snakes (/T. sirtalis/). Young harvest mice pups were particularly susceptible to spring prairie fires; mortality to these on a 22.8-ha section burned 26 April 1976 was estimated at between 208 and 522 individuals. Many eggs of ground-nesting birds were destroyed by the fires; species included were ring-necked pheasant (/Phasianus colchicus/), bobwhite quail (/Colinus virginianus/), mallard duck (/Anas platyrhynchos/) and meadowlark (Sturnella neglecta/).

Multivariate and univariate analyses, in addition to qualitative measures, of all cottontails (except /S. audubonii/ and /S. idahoensis/) of the genus /Sylvilagus/ from west-central and central United States, Mexico, Central America, and northern South America (Colombia, Venezuela, and Ecuador) reveals that these currently recognized species are valid: /S. floridanus/; /S. nuttallii/; /S. cunicularius/; /S. graysoni/; /S. brasiliensis/; and /S. insonus/. Also, two presently considered subspecies of /S. brasiliensis/ are resurrected to specific status, /Sylvilagus insonus/ and the two newly recognized species are monotypic and the other five species are composed of 30 subspecies. Approximately 30 other subspecies are placed in synonymy and three others are described.

[Inst. Environ. Sci., Univ. O.F.S., Bloemfontein 9301, South Africa] Summary: Manuring by penguins, wandering albatrosses and burrowing petrel and prion species substantially enhances P concentrations in Marion Island soils and plants. Non-manured soils contain low levels of plant-available P on a soil volume basis but the evidence suggests that the island soils are primarily deficient in N rather than P.

Fort Collins, CO 80523

As the Nation's principal conservation agency, the Department of the Interior has responsibility for most of our nationally owned public lands and natural resources. This includes fostering the wisest use of our land and water resources, protecting our fish and wildlife, preserving the environmental and cultural values of our national parks and historical places, and providing for the enjoyment of life through outdoor recreation. The Department assesses our energy and mineral resources and works to assure that their development is in the best interests of all our people. The Department also has a major responsibility for American Indian reservation communities and for people who live in island territories under U.S. administration.
